14. PROCEDURAL NOTES

- 14.1. Read the Instructions for Use carefully before performing the test.
- 14.2. Testing needs to be performed under proper testing conditions.
- 14.3. Protect the test cassette from moisture.
- 14.4. All reagents and samples should reach room temperature before use.
- 14.5. Do not use turbid or contaminated samples.

15. EXPLANATION OF THE SYMBOLS USED

	In vitro diagnostic medical device
	Catalogue Number
	Batch Code
	Manufacturer
	Date of Manufacture
	Use by date
	Do Not Use if Package is Damaged
	Consult Instructions for Use
	Temperature Limit at 2°C-30°C
	Sufficient content for 5 or 25 Cassettes (Tests)
	Do Not Re-use
	Caution
	Keep Dry

13.3. Interference Studies

13.3.1. Endogenous Interference of SARS-CoV-2 Antigen Rapid Test (Colloidal Gold Method) was evaluated by testing with a panel of various respiratory pathogens that could potentially endogenous interference-react with SARS-CoV-2 Antigen Rapid Test (Colloidal Gold Method) in a negative and a 3xLoD sample. Each organism and virus were tested in triplicate. The endogenous interference substances listed below did not interfere with the test results of the SARS-CoV-2 Antigen Rapid Test (Colloidal Gold Method).

13.3. Interferenz-Studien

13.3.1. Studien zu endogenen Störsubstanzen Die endogene Interferenz des SARS-CoV-2 Antigen Schnelltest (Kolloidale Goldmethode) wurde durch Testen eines Panels von verschiedenen Atemwegspathogenen, die potenziell endogen mit dem SARS-CoV-2 Antigen Schnelltest (Kolloidalem Goldmethode) interferieren könnten, in einer negativen und einer 3xLoD-Probe bewertet. Jeder Organismus und jedes Virus wurden in dreifacher Ausführung getestet. Die unten aufgeführten endogenen Störsubstanzen beeinträchtigen die Testergebnisse des SARS-CoV-2 Antigen Schnelltest nicht:

Virus de la Varicela Zoster (VZV)	1.05×10^6 pfu/mL	No
Parvovirus B19	1.05×10^6 pfu/mL	No
Streptococcus pneumoniae	1.0×10^6 CFU/mL	No

13.3. Estudios de interferencia 13.3.1. Estudios de sustancias de interferencia endógena Se evaluó la interferencia endógena de la prueba rápida del antígeno del SARS-CoV-2 (método del oro coloidal) mediante la prueba de un panel de patógenos respiratorios de alta prevalencia que podrían reaccionar con interferencia endógena potencial con la prueba rápida del antígeno del SARS-CoV-2 (método del oro coloidal) en una muestra de 3xLoD. Se realizó una prueba a cada organismo y virus 3 veces. Las sustancias de interferencia endógena que se enumeran a continuación no interfieren con los resultados de la prueba rápida de antígeno SARS-CoV-2 (método del oro coloidal):
